Getting in at the Ground Floor: Perspectives from the next generation of NSEE Researchers

Presenters: Cesar Delgado, University of Michigan

Kelly Hutchinson, Purdue University

Emily Shipley, University of Illinois at Chicago

Sarah Dugan, Northwestern University

Moderator:

Tom Moher, University of Illinois at Chicago

Abstract:

The articulation of Nanoscience and Engineering Education as a distinctive research and training domain is a relatively recent phenomenon, but already young researchers are beginning to identify with and make important contributions to the field. In this seminar, four young researchers will describe their experiences as members of the National Center for Learning and teaching in Nanoscale Science and Engineering (NCLT), including an overview of the research in which each has been involved and their perspectives as members of the "next generation" of NSEE researchers.
